SMITH ENTERPRISE GOOD IRON™ 7.62MM M14 MUZZLE BRAKE, P/N 2001

New US Coast Guard / Navy issue M14 Muzzle Brake for rapid target transition.

Just adopted by the US Coast Guard after passing their tortuous endurance testing requirements, the SEI Good Iron USCG / Navy Muzzle Brake is designed for extremely rapid follow-up shots with the hard-hitting 7.62mm NATO caliber M-14 service rifle. Provides 25-35% decrease in felt recoil and nearly 100% decrease in muzzle climb over USGI flash suppressor.

This time-proven design, with its 14 gas ports is now made from 1144 Stressproof cold drawn barstock steel for greater durability, tensile strength, and yield characteristics, provided in a manganese phosphate finish.

The M14 USCG / Navy Muzzle Brake is not compatible with the SEI Wind Talker™ M14DC Sound Suppressor, which requires the use of the Vortex® DC Flash Eliminator, P/N 2000V. Installs with issue castle nut.

SPECS: M14 USCG / Navy Muzzle Brake – 1144 Stressproof steel, heat-treated. Manganese Phosphate. Diameter 0.860 inches, Overall Length 3.400 in., Weight 0.31 of a lb. Two piece design with 5/8 X 20 TPI threads (RH). Marked: U.S.C.G. Smith Ent.
