**SMITH ENTERPRISE VORTEX® MK48 7.62MM NATO, P/N 1041**

**New enhanced design now supports use of SEI Direct Connect sound suppressor.**

The world's most effective flash eliminator is now available the MK48 General Purpose Machine Gun (GPMG). Based on the combat-proven Vortex system, the definitive development of the patented Vortex design now features a 40% increase in structural rigidity. This new version also enables the use of our new Direct Connect (DC) 7.62mm GPMG sound suppressors. The new MK48 model features our patented 15-degree helix, guaranteeing a complete propellant burn and negligible flash, unlike the standard issue closed-end "bird cage" unit or competing straight-flute designs. Right hand helical flutes will not loosen under sustained fire. The aligning of exiting gases helps to improve accuracy.

The new MK48/240 BFA is machined from 8620 steel and features a hardened 416 stainless steel shaft for long service life. The body of the BFA is supplied in a durable powder coat finish. The robust dimensions, manner of construction and use of high-grade materials offer a quantum improvement over the current issue item. Also, a grenade ring is attached to the center shaft to prevent loss in the field.

*SPECS: 8620 steel, heat-treated, RC 35-38, black parkerized per MIL SPEC. 25/32 x 24 TPI, 0.0985" diameter, 2.900" long, 0.36 lbs wt.*

**Part No. 1041V      MK48 Vortex Flash Eliminator**  
**Part No. 1024      MK48/240 Blank Firing Adaptor (BFA)**
